**Cingular Completes \$160+ Million Investment in
Colorado's Wireless Network**
*90+ Cell Sites Added in 7-County Metro Area; 145 State-wide In
Past 18 months*

DENVER, CO November 14, 2006 – Cingular Wireless, the nation's largest wireless carrier, has invested more than \$160 million in Colorado over the past two years to extend network coverage and enhance quality for customers throughout the state. Between May 2005 and the end of September 2006, the company has completed and placed into service a total of 145 new Colorado cell sites to support increased voice and data usage.

“Cingular Wireless has always been committed to building the best network for its customers and we are proud to announce we are delivering on that promise,” said Sue Knox, Vice President of Cingular's Denver-based Rocky Mountain region. “All of these cell sites are currently operational; providing enhanced voice and data service to our customers.”

Cingular has added more than 93 new cell sites in the 7-county greater Denver area; providing improvements in both wireless coverage and quality.

- Of these, 20 sites have been added in Denver's central core, serving areas such as Colfax/Colorado Boulevard, Park Hill, Southmoor/Tamarac Square/north DTC, northwest Denver and Cherry Creek.
- Along the Boulder/Broomfield corridor, 13 additional sites are now operational.
- Denver's northern suburbs (Thornton Westminster, Arvada, Commerce City) have had 13 new sites placed into service.
- Twenty new sites now provide enhanced coverage in the DTC, Littleton, Englewood, Greenwood Village and Highlands Ranch areas.
- Fifteen sites have been deployed in Lakewood, Ken Caryl, along the western leg of C-470 and I-70 West.
- Twelve additional sites throughout DIA, Aurora, Lowry and Parker improve quality and coverage along the southeastern section of the metro area.

A large number of sites have also been also added in Colorado Springs (25), Fort Collins/Greeley (15) and on the Western Slope (10), for an overall total of 145 new sites now operational in the Colorado network.

Enhancing the Customer Experience

In order to help customers identify specific geographic improvements for the company's wireless coverage, the company offers an interactive mapping tool at all retail locations and by calling 1-866-CINGULAR. This tool provides customers with up-to-date wireless coverage information and is designed to answer specific coverage questions based on an address, street intersection, zip code or even a landmark.

Jobs and Call Center

In addition to its significant network investment, Cingular now employs more than 250 people throughout Colorado. Furthermore, the company's expanded cell site activity has resulted in more than 50 additional individuals being utilized by outside contractors to turn up these new facilities. Finally, in May 2006, the company broke ground for a new call center in Pueblo, which is expected to begin handling customer calls by the end of the year. When fully staffed, this call center will employ up to 500 people.

Network Testing

Cingular diligently monitors the quality and coverage of its network. Across the nation, technicians and other third-parties are drive-testing nearly 30 million miles of the network each year to improve coverage and quality. That's the equivalent of 10,000 trips from coast to coast (or more than 50 round trips to the moon) to ensure customers receive the best possible wireless experience in the United States.
